Professional Summary

Final-year Computer Science undergraduate at VIT Bhopal (CGPA: 9.03) with a strong interest in backend development. Have built personal projects using Node.js, Express.js, MongoDB, and REST APIs. Eager to apply my skills in a real-world environment and grow into a backend engineering role.

Education

Vellore Institute of Technology — Bhopal, MP
Bachelor of Technology in Computer Science and Engineering; CGPA: 9.03/10 — 2023 – 2027

St. Theresa School — Nainital, UK
Class XII (CBSE); Percentage: 89.83% — 2022 – 2023

St. Theresa School — Nainital, UK
Class X (CBSE); Percentage: 90.83% — 2020 – 2021

Technical Skills

- **Languages:** Java, JavaScript, HTML, CSS
- **Frameworks & Libraries:** Express.js, Mongoose
- **Databases:** MongoDB, MySQL
- **Tools:** Git, GitHub, Postman

Projects

Event-Sourced Ledger – Double-Entry Banking Core *Node.js, Express.js, MongoDB*

- Modelled account balances as a derived aggregate over an append-only Ledger collection rather than a mutable field; every transfer inserts paired DEBIT/CREDIT documents, making the full money trail queryable and tamper-evident.
- Enforced ledger immutability at the schema level with Mongoose pre-hooks on updateOne, deleteMany, and six other mutating operations, so no application code path can silently corrupt historical entries.
- Wrapped transaction creation, debit entry, credit entry, and status update inside a single MongoDB session (startTransaction / commitTransaction), ensuring any mid-flight failure rolls back all four writes atomically.
- Guarded against duplicate charges by indexing a client-supplied idempotencyKey on the Transaction collection; repeated requests with the same key short-circuit before touching the ledger and return the original result.

HireVaani – Multilingual Voice Screening Platform *Node.js, Express.js, EJS, MongoDB*

- Built a full-stack interview platform with Node.js and Express.js backend, rendering dynamic EJS views and exposing 7+ RESTful API routes for sessions, transcription, evaluation, and candidate management.
- Implemented JWT-based authentication with bcrypt password hashing and role-based access control, supporting candidate and organizer roles with a hardened admin fallback.
- Integrated Sarvam AI Speech-to-Text API via Multer for audio upload and language detection, enabling voice-based interviews in Kannada, Hindi, and English.
- Connected Google Gemini API to evaluate candidate responses across 5 dimensions (relevance, clarity, confidence, technical depth, communication) and generate structured hiring decisions.
- Designed dual-mode data persistence using MongoDB with Mongoose ODM and an in-memory fallback store, ensuring zero-downtime operation when the database is unavailable.

Co-Curricular Activities

Event Lead
Bashcraft Club

- Led the planning and execution of 4 technical events, coordinating 10+ speakers and engaging 200+ participants.
